

Total Network Monitor 2

Brochure

Total Network Monitor 2 is a network monitoring software designed to continuously monitor your local network, individual computers and services that require careful attention and thorough control. TNM 2 will alert you of any problem in advance and generate a detailed report on the circumstances of the failure.

How it works

Sensors

Total Network Monitor is linked to the outside world through sensors. They provide TNM with all the data for analysis.

Available sensors

🌐 Internet:

- ICMP
- TCP
- HTTP
- FTP
- SMTP
- POP3
- IMAP
- Telnet

🪟 Windows:

- Event log
- Service state
- Registry state
- System performance

📁 File:

- File existence
- File size
- File compare
- File count
- File CRC32
- File content
- Disk space

Actions

When something goes wrong, actions are executed. These actions alert you so that you can fix everything in time.

Available actions

Alerts:

- Message box
- Popup window
- Play sound
- Write to file

Messages:

- E-mail
- Jabber
- Event log

Measures:

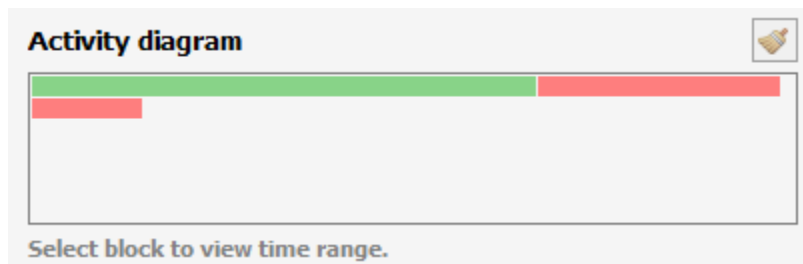

- Launch application
- Run script
- Reload service
- Reboot computer
